Cut Flowers of the World: A Vibrant Journey Through Nature's Most Beautiful Blooms

Cut flowers of the world have long captivated human hearts with their delicate beauty, enchanting fragrances, and symbolic meanings. Whether adorning a festive table, brightening a hospital room, or expressing emotions in a bouquet, cut flowers play a significant role in cultures across the globe. From the classic elegance of roses to the exotic allure of orchids, the diversity of cut flowers reflects the vastness and richness of the natural world. In this article, we will explore various popular cut flowers from different regions, their unique characteristics, and tips for keeping them fresh and vibrant. Let's embark on this colorful journey through gardens and florists worldwide.

Understanding Cut Flowers and Their Global Appeal

Cut flowers are flowers that have been harvested from the plant for decorative use, often arranged in vases or bouquets. They are prized not only for their aesthetic value but also for the emotions they convey—love, sympathy, celebration, and remembrance. The global cut flower industry is vast and diverse, with certain flowers becoming iconic symbols in different cultures.

The demand for fresh bouquets has led to the cultivation of many flowers in specialized farms, often in countries with favorable climates like the Netherlands, Kenya, Colombia, and Ecuador. These regions have emerged as major exporters, supplying supermarkets, florists, and events worldwide.

Why Are Cut Flowers So Popular Worldwide?

- **Symbolism and Traditions:** Flowers like lilies, carnations, and chrysanthemums carry cultural and religious significance in many societies.
- **Aesthetic Beauty:** Their colors and shapes add life and elegance to any space.
- **Emotional Expression:** Flowers communicate feelings without words, making them perfect gifts.
- **Versatility:** Suitable for weddings, funerals, birthdays, and everyday decoration.

Famous Cut Flowers of the World and Their Origins

Each flower has a story deeply rooted in its native land. Let's delve into some of the most beloved cut flowers and learn about their backgrounds.

Roses: The Universal Symbol of Love

Roses are undoubtedly the most famous cut flowers worldwide. Originating in Asia, Europe, and North America, roses have been cultivated for thousands of years. Their wide range of colors—from passionate red to pure white and cheerful yellow—makes them versatile for any occasion.

The Netherlands is one of the largest producers and exporters of roses. Dutch greenhouses use advanced technologies to grow roses year-round, ensuring fresh stems reach customers globally. Roses require proper care, including cutting stems at an angle and changing water daily to prolong their vase life.

Tulips: The Icon of Spring

Native to Central Asia and Turkey, tulips became extraordinarily popular in the Netherlands during the 17th century, sparking the famous "Tulip Mania." These cup-shaped flowers come in vibrant hues like red, pink, purple, and yellow, symbolizing perfect love and rebirth.

Tulips are among the most commonly sold cut flowers during spring. They thrive in cooler climates and are often grown in large fields before being harvested for bouquets. Tulips continue to brighten homes and events with their cheerful appearance.

Orchids: Exotic Elegance from Tropical Climates

Orchids, known for their intricate and exotic blooms, are native to tropical regions worldwide, including South America and Southeast Asia. As cut flowers, orchids add a touch of sophistication and luxury to any arrangement.

Due to their delicate nature, orchids often require gentle handling and special care. They're popular in weddings and upscale floral designs. Cymbidium and Phalaenopsis are among the most common orchid varieties used as cut flowers.

Chrysanthemums: Autumn's Floral Stars

Chrysanthemums, or mums, are native to East Asia and northeastern Europe. They hold cultural importance in countries like Japan and China, symbolizing longevity and rejuvenation.

These flowers come in diverse shapes and colors, from pom-pom like blooms to daisy-shaped petals. Chrysanthemums are hardy and have a relatively long vase life, making them favorites for fall arrangements and sympathy bouquets.

Gerbera Daisies: Cheerful and Bright

Gerbera daisies, originally from South Africa and Asia, are known for their large, vibrant blooms in shades of orange, pink, red, and white. Their cheerful appearance makes them popular in celebratory bouquets and casual floral displays.

Gerberas require fresh, clean water and benefit from cool temperatures to maintain their freshness. They bring a joyful energy wherever they are displayed.

Tips for Selecting and Caring for Cut Flowers

Choosing the right flowers and maintaining their freshness is key to enjoying cut flowers to the fullest. Here are some valuable tips for flower lovers:

- **Choose Fresh Stems:** Look for flowers with firm petals and healthy leaves. Avoid those with browning edges or drooping heads.
- **Cut Stems Properly:** Use sharp scissors or shears to make a diagonal cut under running water to increase water absorption.
- **Change Water Regularly:** Replace the vase water every two days to prevent bacterial growth.
- **Use Flower Food:** Many florists provide packets with nutrients to extend vase life; use them as directed.
- **Keep Flowers Cool:** Avoid placing bouquets in direct sunlight, near heat sources, or on top of fruits, which release ethylene gas that can accelerate wilting.

How to Extend the Life of Your Bouquet

In addition to the basics, you can try home remedies like adding a teaspoon of sugar or a few drops of bleach to the water. Sugar nourishes the stems, while bleach helps keep bacteria at bay. Regularly removing wilted leaves and flowers will also keep your bouquet looking fresh longer.

The Environmental Impact and Sustainability of Cut Flowers

As the popularity of cut flowers grows, so does awareness of their environmental footprint. Flower farming can involve significant water use, pesticides, and carbon emissions from transportation, especially for exotic species flown across continents.

Thankfully, sustainable practices are gaining momentum:

- **Locally Grown Flowers:** Supporting local growers reduces transportation emissions and supports regional agriculture.
- **Organic Farming:** Many flower farms now adopt organic methods to minimize pesticide use.
- **Seasonal Buying:** Choosing flowers in season decreases resource strain and often costs less.
- **Eco-Friendly Packaging:** Using biodegradable or recycled materials for bouquets helps reduce waste.

Choosing sustainably grown cut flowers allows enthusiasts to enjoy their beauty while being mindful of environmental impact.

Exploring Unique Cut Flowers from Different Continents

Beyond the classics, the world offers a fascinating array of lesser-known cut flowers that bring unique textures, colors, and scents to floral arrangements.

Protea: South Africa's Floral Treasure

Protea flowers, native to South Africa, are striking with their large, spiky blooms and vibrant colors. They symbolize courage and transformation and are increasingly popular in modern floral designs.

Bird of Paradise: Tropical Drama from Oceania

The Bird of Paradise flower, with its bright orange and blue colors resembling a bird in flight, originates from South Africa but is widely cultivated in tropical areas like Hawaii and Australia. It adds dramatic flair to bouquets and centerpieces.

Ranunculus: Delicate Beauty from Eurasia

Ranunculus flowers boast layers of paper-thin petals in shades of pink, red, yellow, and white. Native to the Mediterranean region, they have gained popularity in wedding bouquets for their romantic appearance.

Celebrating Cut Flowers in Art and Culture

Throughout history, cut flowers have inspired artists, poets, and designers. From the still-life masterpieces of the Dutch Golden Age to contemporary floral installations, flowers continue to symbolize life's fleeting beauty.

In many cultures, specific flowers are integral to ceremonies. For example, marigolds in India are central to festivals like Diwali and Day of the Dead celebrations in Mexico feature marigolds as well. These cultural connections enhance the universal appeal of cut flowers.

Whether used in everyday life or grand occasions, cut flowers of the world connect us to nature's cycles and each other's emotions in ways that transcend language. Their colors, forms, and fragrances remind us to slow down, appreciate beauty, and celebrate life's moments—big and small.

Frequently Asked Questions

What are the most popular cut flowers worldwide?

The most popular cut flowers worldwide include roses, lilies, tulips, carnations, orchids, chrysanthemums, and gerberas.

Which country is the largest exporter of cut flowers?

The Netherlands is the largest exporter of cut flowers globally, known for its advanced floriculture industry and extensive flower auctions.

What factors influence the vase life of cut flowers?

The vase life of cut flowers is influenced by factors such as flower type, freshness at harvest, water quality, temperature, and proper care like trimming stems and changing water regularly.

How do climate conditions affect the cultivation of cut flowers?

Climate conditions such as temperature, humidity, and sunlight significantly affect the growth, quality, and blooming cycle of cut flowers, with some species requiring specific conditions to thrive.

What are some sustainable practices in the cut flower industry?

Sustainable practices include using organic growing methods, reducing pesticide use, employing water-saving irrigation techniques, supporting local growers, and using biodegradable or recyclable packaging.

Which cut flowers have symbolic meanings across different cultures?

Roses symbolize love and passion, lilies represent purity, chrysanthemums signify longevity and loyalty, and orchids denote beauty and strength, with meanings varying across cultures.

How has technology impacted the global cut flower market?

Technology has improved cultivation through controlled environment agriculture, enhanced transportation and cold chain logistics to maintain freshness, and online marketplaces that expand market reach.

What are some challenges faced by the global cut flower industry?

Challenges include climate change effects, high water usage, labor shortages, competition from synthetic flowers, and the need for sustainable and ethical production practices.

Which cut flowers are native to specific regions of the world?

Tulips are native to Central Asia and Turkey, orchids are widespread in tropical regions, proteas originate from South Africa, and carnations are native to the Mediterranean region.

How can consumers extend the life of their cut flowers at home?

Consumers can extend cut flower life by trimming stems at an angle, using clean water with flower food, keeping flowers away from direct sunlight and heat, and changing water every two days.

Cut Flowers of the World: A Global Perspective on Nature's Most Celebrated Blooms

Cut flowers of the world have long been symbols of beauty, celebration, and sentiment across cultures and continents. From the elegant roses of Ecuador to the vibrant tulips of the Netherlands, these delicate blooms not only represent aesthetic value but also form the backbone of a multi-billion-dollar global industry. As the demand for fresh flowers continues to rise, understanding the diversity, economics, and sustainability of cut flowers worldwide becomes essential for florists, consumers, and environmental stakeholders alike.

Global Diversity in Cut Flowers

The variety of cut flowers available globally is staggering, reflecting both the climatic conditions of different regions and cultural preferences. Each flower species carries unique characteristics—color, fragrance, longevity, and symbolism—that influence its popularity and commercial viability. Countries with favorable climates and advanced horticultural techniques dominate the production of certain flower types, while others specialize in niche varieties prized for their rarity or uniqueness.

Leading Cut Flower-Producing Countries

The Netherlands remains the undisputed leader in cut flower production and export, often dubbed the “flower shop of the world.” Its temperate climate and innovative greenhouse technologies allow for year-round cultivation of tulips, lilies, carnations, and chrysanthemums. The Dutch flower auctions,

such as those in Aalsmeer, are central hubs where millions of flowers change hands daily, highlighting the Netherlands' pivotal role in the international flower trade.

Meanwhile, countries like Colombia and Ecuador have surged to prominence in recent decades due to their ideal equatorial climates and high-altitude growing conditions, which extend the flowering season and improve bloom quality. Colombia, for instance, is one of the largest exporters of roses globally, supplying major markets in North America and Europe. Similarly, Kenya has become a significant flower exporter, especially for roses and other cut flowers, benefiting from its equatorial climate and proximity to European markets.

Popular Varieties of Cut Flowers

Among the myriad varieties of cut flowers traded globally, certain species dominate due to their universal appeal and cultural significance:

- **Roses:** Universally regarded as a symbol of love and romance, roses are the most popular cut flower worldwide. Their wide range of colors and varieties, from the classic red to exotic blues and yellows, make them a versatile choice for many occasions.
- **Tulips:** Especially associated with the Netherlands, tulips are celebrated for their vibrant colors and elegant shape. They have a shorter vase life but remain a favorite for springtime bouquets.
- **Chrysanthemums:** Valued for their longevity, chrysanthemums are widely used in floral arrangements and symbolize honor and respect in many cultures.
- **Lilies:** Known for their striking appearance and fragrance, lilies are often used in both celebratory and somber arrangements.
- **Orchids:** Exotic and sophisticated, orchids offer a longer vase life and are prized for their unique forms and colors.

The Economics of the Global Cut Flower Industry

The cut flower industry is a complex web of growers, wholesalers, auction houses, exporters, importers, and retailers. It is estimated that the global cut flower market is valued at over \$50 billion annually, with continuous growth driven by urbanization, rising incomes, and evolving social customs that emphasize gifting and decoration.

Supply Chain Dynamics

Flowers are highly perishable commodities, demanding an efficient and swift supply chain to ensure freshness upon delivery. This necessity has led to the development of sophisticated logistics networks, including temperature-controlled storage and rapid air freight services. For example, flowers grown in East Africa are often flown by overnight cargo flights to European markets within 24 hours of harvesting.

Despite these advancements, the supply chain also poses challenges. Delays or mishandling can significantly reduce flower quality, leading to economic losses. Moreover, fluctuations in fuel prices and global trade policies can impact shipping costs and market access, affecting profitability at multiple stages.

Market Trends and Consumer Preferences

Contemporary consumers are increasingly conscientious about the origins and ethical implications of their purchases. This shift has led to growing demand for sustainably grown flowers, fair-trade certified products, and locally sourced varieties. Flowers produced using environmentally friendly practices—such as reduced pesticide use, water conservation, and organic farming—are gaining traction in premium markets.

Additionally, the rise of e-commerce and online flower delivery services has transformed how consumers interact with the flower market. Convenience, customization, and rapid delivery options have become key competitive factors for florists and wholesalers.

Sustainability and Environmental Considerations

While the cut flower industry brings economic benefits, it also raises environmental concerns. Intensive flower farming can lead to excessive water consumption, pesticide use, and carbon emissions associated with transportation.

Water and Chemical Use

Certain regions, such as Kenya and Colombia, face challenges related to water scarcity and pollution. Flower farms often rely on substantial irrigation and agrochemicals to maintain high yields and quality. This can strain local water resources and ecosystems, sometimes leading to conflicts with local communities over water access.

Efforts to mitigate these impacts include implementing drip irrigation systems, integrated pest management, and organic farming techniques. Certifications like Florverde and Fair Trade Flowers promote environmentally responsible and socially equitable practices among growers.

Carbon Footprint of Cut Flowers

The global nature of the cut flower trade contributes to significant carbon emissions, primarily due to air freight transportation. For instance, flowers flown from East Africa or Latin America to Europe or North America have a higher carbon footprint compared to locally grown alternatives.

Some consumers and retailers are responding by seeking seasonal and regionally grown flowers to reduce transportation-related emissions. Additionally, innovations in cold chain logistics aim to optimize shipment efficiency and reduce waste.

Cultural Significance and Symbolism

Beyond their commercial value, cut flowers of the world carry rich cultural meanings that vary widely. Understanding these nuances is crucial for florists, event planners, and marketers who cater to diverse clientele.

In Western cultures, roses symbolize romantic love, while lilies often represent purity or mourning. In Asian cultures, chrysanthemums might signify longevity and happiness, but in some European countries, they are linked with funerals. Tulips hold a special place in Dutch heritage, symbolizing prosperity and the country's floral identity.

Such symbolism influences demand patterns, especially around holidays and ceremonies like Valentine's Day, Mother's Day, weddings, and funerals, shaping production cycles and marketing strategies.

Emerging Trends in Floral Design

The global appreciation for cut flowers has also spurred innovation in floral design and usage. Contemporary arrangements often blend traditional blooms with greenery, exotic flowers, and sustainable materials to create unique aesthetic expressions. The growing interest in minimalism, eco-conscious design, and wildflower-inspired bouquets reflects broader lifestyle trends favoring authenticity and environmental awareness.

Moreover, technologies such as flower preservation and dyeing have expanded creative possibilities, allowing florists to offer longer-lasting or customized products.

The world of cut flowers is a dynamic intersection of nature, culture, and commerce. As demand grows and consumer attitudes evolve, the industry faces both opportunities and challenges in balancing economic growth with sustainability and cultural sensitivity. Whether admired for their beauty, symbolism, or economic impact, cut flowers of the world remain a timeless testament to humanity's enduring connection to the natural world.

cut flowers of the world: *The Kenyan Cut Flower Industry and Global Market Dynamics*

Andreas Gemählich, 2022 Investigates the production, trade and consumption of the bouquets sold in European supermarkets and the consequences of this for the globalised economy. From a macro-perspective, it appears that the cut flower industry has changed into a buyer-driven value chain with corporate retailers as the new lead firms. Yet, as this book shows, this is insufficient to explain how new trade relations come into being, and the consequences of this, not only for global economics, but for the producers, climate change and rural livelihoods. As the retailers and wholesalers of the flower industry in the West linked directly to producers in the Global South, trade relations changed fundamentally, and this critical new book explores the complexities of the power asymmetries and the way in which corporate retailers have shaped the market to promote their own interests, as well as the role non-economic actors played. This book examines in detail the situation at Lake Naivasha, Kenya, which has played a central part within this new market order. Since the 1970s, the area has developed into one of the most important production areas for the ready-made bouquets that sell so cheaply in European supermarkets. For the flower growers themselves, however, coping with the new conditions of supply and demand, the new market order has brought financial precariousness. Farms needed to be flexible in the production and marketing of their flowers. Yet while they were able to expand their production and achieve more stable employment conditions, this has not resulted in significantly higher remuneration. The rapidly changing economic situation has also had a profound impact, not only on local stakeholders, but on the environment, where there is intensified competition for resources and new production technologies. Published in association with the Collaborative Research Centre FUTURE RURAL AFRICA, funded by the German Research Council (DFG).

cut flowers of the world: Cut Flowers and Foliages James E. Faust, John Dole, 2021-05-27 The cut flower and foliage industry is a global business with major production locations in North America, South America, Central America, East Africa, Europe, the Middle East, Asia, Australia and New Zealand. Few other horticulture crops are as ubiquitous, yet the production techniques and challenges are universal. This book describes the main international production locations and markets, including current trends and directions. The focus is on production in protected cultivation. The major species - including rose, chrysanthemum, carnation, orchid and gerbera - dominate the global market and these are individually explored in detail. Specialty species and cut foliages are also addressed, as well as significant details of production, including irrigation and fertilization, disease and disease management, and biological control of pests. Finally, the postharvest chapter covers details of harvesting, transporting and delivering high quality flowers that provide an excellent vase life.

cut flowers of the world: Flowers for Trade V.L.Sheela, 2008-03-05 The book is a classic covering flowers used in decoration of houses, offices, restaurants, hospitals and private places of rest and relaxation. For nature lovers, it is a paradise of colours, forms and shapes. Fragrant flowers, flowers for bouquet making, flowers for essences and bonsai are narrated to the

enchantment of students and scholars as well. There are 21 chapters dealing with general topics in flower trade, standards, markets and global demand and supply. The specific chapters deal elaborately anthuriums, carnations, china aster, chrysanthemums, gerbera, gladiolus, heliconias, jasmine, marigold, orchids, roses and tube roses. An exhaustive chapter on new cut flowers narrates recent introductions. The Japanese Bonsai is dealt in exquisite style. Research and development in this sector are separately dealt with. Future prospects, trends and globalised flower marketing are written for use of floriculturists. Modern technology of protected growing of flowers is informative. All the flowers indicated in the book are presented in colour photograph forms as well.

cut flowers of the world: Webworks Katherine Tasheff Carlton, 2001

cut flowers of the world: World Employment Report 2004-05 International Labour Office, 2005
Productive employment is the economic foundation of decent work. Laying this foundation is the central challenge we now face. Decent and productive employment remains only an aspiration for many hundreds of millions of people, frustrated by a reality of rising unemployment or employment that does not provide the chance to escape poverty.

cut flowers of the world: Fresh Cut Roses United States International Trade Commission, 1980

cut flowers of the world: USITC Publication, 1994

cut flowers of the world: The Commercial Use of Biodiversity Kerry Ten Kate, Sarah A Laird, 2019-09-18 Originally published in 1999 The Commercial Use of Biodiversity examines how biodiversity and the genetic material it contains are now as valuable resources. Access to genetic resources and their commercial development involve a wide range of parties such as conservation and research institutes, local communities, government agencies and companies. Equitable partnerships are not only crucial to conservation and economic development but are also in the interests of business and often required by law. In this authoritative and comprehensive volume, the authors explain the provisions of the Convention on Biological Diversity on access and benefit-sharing, the effect of national laws to implement these, and aspects of typical contracts for the transfer of materials. They provide a unique sector-by-sector analysis of how genetic resources are used, the scientific, technological and regulatory trends and the different markets in Pharmaceuticals, Botanical Medicines, Crop Development, Horticulture, Crop Protection, Biotechnology (in fields other than healthcare and agriculture) and Personal Care and Cosmetics Products. This will be an essential sourcebook for all those in the commercial chain, from raw material collection to product discovery, development and marketing, for governments and policy-makers drafting laws on access and for all the institutions, communities and individuals involved in the conservation, use, study and commercialisation of genetic resources.

cut flowers of the world: The Encyclopedia of Cut Flowers Calvert Crary, 2023-10-10 From Calvert Crary and Bruce Littlefield, The Encyclopedia of Cut Flowers is a comprehensive, gorgeously visual guide that answers every question you've ever had (and a few you didn't know to ask!) about buying, caring for, and prolonging the lives of more than 140 different varieties of commonly available cut flowers. The Encyclopedia of Cut Flowers dives deep into the world of fresh-cut flowers, featuring unique entries for 143 different varieties of commonly available cut flowers that readers can buy at their local grocery store or flower market. Each flower entry offers authoritative tips for conditioning methods (eg-cut flowers should never be put near fresh fruit because fruit produces ethylene gas which will shorten the flowers' life), as well as scientific and common names, best seasons for buying (eg—lilies in spring, dahlias in summer) and fascinating facts about each bloom. An introductory section offers basic tips for styling arrangements at home, and for keeping flowers hydrated and alive for as long as possible. By the time readers are done flipping through the pages of The Encyclopedia of Cut Flowers, which features more than 150 gorgeous color photographs of flowers, they'll be experts in the field!

cut flowers of the world: Uruguay Round of Multilateral Trade Negotiations United States. Congress. House. Committee on Ways and Means. Subcommittee on Trade, 1994

cut flowers of the world: *The Floral World and Garden Guide* Shirley Hibberd, 1861

cut flowers of the world: *Agricultural Outlook* , 1991

cut flowers of the world: The Science of Horticulture Volume 02 K V Peter, 2011-01-01 The volume covers recent research materials from countries like India, USA, Japan, European Union, UK etc. on vegetable Science, Fruit Science, Ornamentals, Spices, Plantation Crops and Postharvest Technology. Contributed by the best teachers and scientists in the field. The volumes expose the readers to the basics of Horticultural practices and phenomena with chapters on: 1. Geographical Indications in horticulture by Elsy, C.R. and Mridula N. 2. Emerging trends in bioinformatics by Keshavachandran, R., Reena, N. and Nancy Thomas. 3. Chemistry of Fragrance by Shamina Azeez. 4. Advances in development of salt and water stress tolerant plants by Vanaja T. 5. Physiology of dormancy by Passam, Harold C and Alexopoulos, Alexios A. 6. Principles of preservation and packing to improve quality and extend shelf life of fresh horticultural produce by Bakshi, A.K. and Aggarwal Poonam. 7. Graft incompatibility by Masayo Kawaguchi, David Backhouse, Acram Taji and Masayuki Oda. 8. Role and symptoms of deficiency of micronutrients in horticultural crops by Nirmala Devi, S. and Sadhan Kumar P.G. 9. History of bioinformatics by Keshavachandran R. and Nancy Thomas. 10. Entomology in India - a historical perspective by Sosamma Jacob. 11. Ecofriendly approaches for the management of pests and disease of horticultural crops by Nakkeeran S., Renuka Devi P and Marimuthu T. 12. HELO priming in vegetable crops by Krishna Kumar K. 13. Controlled atmosphere storage of fruits by Sudhakar Rao, D.V. Gopalakrishna Rao, K.P. and Narayana C.K. 14. Physiology of fruit ripening by Dhillon W.S. and Gill P.P.S. 15. Trade in floriculture by Sheela Jayagopan.

cut flowers of the world: Global Economic Prospects and the Developing Countries , 2002 This edition of the annual publication considers the need to reshape the global architecture of world trade, in order to help strengthen the economies of developing countries and reduce world poverty. The report focuses on four policy areas: the establishment of a development round of WTO negotiations to reduce trade barriers; global co-operation to expand trade outside the WTO; the adoption of pro-trade development policies by high-income countries; and enacting trade reforms in developing countries. The findings of the report suggest that developing countries could significantly increase their incomes, if all countries progressively implement the proposed trade reforms. This would result in a world with a much higher standard of living, an estimated 300 million people lifted out of poverty by 2015, and a significant increase in the number of children living beyond their fifth birthday throughout the developing world.

cut flowers of the world: **Horticulture** V.L Sheela, 2019-06-11 Horticulture is a vast field exceedingly rich in opportunities. It is a science, art and business, and involves both production of food and beautification of our surroundings. This book provides a complete introduction to basic horticulture, plant propagation and ornamental horticulture. Topics that are more relevant to the present scenario have been given more emphasis. This book would serve as a useful instructional material for undergraduate students of Agriculture, Horticulture and Botany.
