**did bill nye the science guy died:** *The Death of Expertise* Tom Nichols, 2017-02-01 Technology and increasing levels of education have exposed people to more information than ever before. These societal gains, however, have also helped fuel a surge in narcissistic and misguided intellectual egalitarianism that has crippled informed debates on any number of issues. Today, everyone knows everything: with only a quick trip through WebMD or Wikipedia, average citizens believe themselves to be on an equal intellectual footing with doctors and diplomats. All voices, even the most ridiculous, demand to be taken with equal seriousness, and any claim to the contrary is dismissed as undemocratic elitism. Tom Nichols' *The Death of Expertise* shows how this rejection of experts has occurred: the openness of the internet, the emergence of a customer satisfaction model in higher education, and the transformation of the news industry into a 24-hour entertainment machine, among other reasons. Paradoxically, the increasingly democratic dissemination of information, rather than producing an educated public, has instead created an army of ill-informed and angry citizens who denounce intellectual achievement. When ordinary citizens believe that no one knows more than anyone else, democratic institutions themselves are in danger of falling either to populism or to technocracy or, in the worst case, a combination of both. An update to the 2017 breakout hit, the paperback edition of *The Death of Expertise* provides a new foreword to cover the alarming exacerbation of these trends in the aftermath of Donald Trump's election. Judging from events on the ground since it first published, *The Death of Expertise* issues a warning about the stability and survival of modern democracy in the Information Age that is even more important today.

**did bill nye the science guy died:** *Bad Advice* Paul A. Offit, 2018-06-19 Science doesn't speak for itself. Neck-deep in work that can be messy and confounding and naïve in the ways of public communication, scientists are often unable to package their insights into the neat narratives that the public requires. Enter celebrities, advocates, lobbyists, and the funders behind them, who take advantage of scientists' reluctance to provide easy answers, flooding the media with misleading or

incorrect claims about health risks. Amid this onslaught of spurious information, Americans are more confused than ever about what's good for them and what isn't. In *Bad Advice*, Paul A. Offit shares hard-earned wisdom on the dos and don'ts of battling misinformation. For the past twenty years, Offit has been on the front lines in the fight for sound science and public health. Stepping into the media spotlight as few scientists have done—such as being one of the first to speak out against conspiracy theories linking vaccines to autism—he found himself in the crosshairs of powerful groups intent on promoting pseudoscience. *Bad Advice* discusses science and its adversaries: not just the manias stoked by slick charlatans and their miracle cures but also corrosive, dangerous ideologies such as Holocaust and climate-change denial. Written with wit and passion, Offit's often humorous guide to taking on quack experts and self-appointed activists is a must-read for any American disturbed by the uptick in politicized attacks on science.

In the mind of the reader and any intelligent, open-minded person the answer must be, Evolution is IMPOSSIBLE!, because: Evolution is NOT science; its a faith statement about the past! Evolution breaks 3 unbreakable scientific LAWS! Evolution has never been observed in a laboratory or in the field, but Richard Dawkins said. Evolution has been observed. Its just that it hasnt been observed when its happening. In Evolution all the missing links are still missing, In Evolution there are some creatures whose behavior, design and amazing complexity cant be explained. The history of Evolution contains many frauds. Ill highlight two. How do Evolution proponents explain these issues? Denial, rationalization or just plain lying! Evolution has damaging effects on our culture and wastes valuable resources that could be used to improve health and living conditions, but millions, of our money, is spent on research that can NEVER bring any value to mankind. The answer to the question, Where did we come from? can ONLY be, We are created in Gods image for purpose. We did not come from an explosion of Hydrogen gas and pond scum!
